ö Ļ Callen W, Richardson

2003-018656/01. N-PSDB; ABX08414 Novel purified polypeptide with alpha-amylase activity, useful e.g. for liquefying starch, for textile desizing, for treating lignocellulosic fibers, and for producing high-maltose or high-glucose syrup.

Claim 30; Fig 16; 301pp; English.

The invention relates to a purified polypeptide with alpha-amylase

corrective the projection of a start of a projection of a starth, for modifying small molecules, for Iquefying the breakdown of a starch, for modifying small molecules, for Iquefying starch, for washing an object, for textile desizing, for treating lignocellulosic fibers, for improving fibre properties, for envymatic de-inking of recycled paper pulp, for producing a high-maltose or high-glucose syrup or a mixed syrup, and for increasing the flow of production fluids from a subterranean formation by removing a viscous, starch-containing, damaging subterranean formation which surrounds a completed well bore. The polypeptide is also useful for preparing a dough or a baked product preparing a dough or a baked product preparing a dough or a baked product preparing in completed well bore the containing staring processes, beverages, oil field (fuel ethanol), brewing processes and starch modification in the paper and pulp industry, for removing staring for starch containing stalins from a material and for reducing staling of bakery products. Sequences ABU031040-ABU03144 represent alpha amylase ô 120 120 180 180 240 240 360 300 300 360 09 9 420 420 and the polynucleotide encoding it. A. Molecule the Brookhaven Protein Data Bank, July 1995
A. Contents: annotation; X-ray crystallography, 2.2 angstroms, residues 32-210;222-511
A. Molecule these structural studies suggest 163 is Leu rather than Arg
Submitted to the Brookhaven Protein Data Bank, October 1996

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      The scription: catalyzes the hydrolysis of internal 1,4-alpha-D-glucosidic bonds pathway: glycogen/starch degradation
);Pathway: glycogen/starch degradation
);Superfamily: alpha-amylase, amylolaquefaciens type; alpha-amylase core homology
);Keywords: extracellular protein; glycosidase; heat-stable protein; hydrolase; polysacc
);1-29/bomain: signal sequence #status predicted <SIG>
);30-512/product: alpha-amylase #status experimental <WAT>
);21-250/bomain: alpha-amylase core homology **MMY**
);133,229,264/Binding site: calcium (Asn, Asp, His) #status experimental
);260,290,357/Active site: Asp, Glu, Asp #status experimental
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Title: Crystal structure of calcium-depleted Bacillus licheniformis alpha-amylase at Reference number: S53788; MUID:95182462; PMID:7877175
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    18.6%; Score 458.5; DB 1; Length 512;

A;Title: Nucleotide sequence of the maltchexose-producing amylase gene from an alkalophi A;Reference number: A27705; MUID:88162814; PMID:3258152

A;Accession: A27705
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              organism.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                A Description: catalyzes the hydrolysis of internal 1,4-alpha-D-glucosidic bonds
A:Pathway: glycogen/starch degradation
C:Superfamily: alpha-amylase, amyloliquefaciens type; alpha-amylase core homology
C:Keywords: extracellular protein; glycosidase; hydrolase; polysaccharide degradation
F:1-33/Domain: signal sequence #status predicted <SIG>
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         23;

Title: Perfect score: Sequence:

141681 seqs, 52070155 residues Scoring table: BLOSUM62 Gapop 10.0 , Gapext 0.5 Searched:

Total number of hits satisfying chosen parameters:

Post-processing: Minimum Match 0% Maximum Match 100% Listing first 45 summaries Minimum DB seq length: 0 Maximum DB seq length: 200000000

Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

-! CATALYTIC ACTIVITY: Endohydrolysis of 1,4-alpha-glucosidic

-! CATALYTIC ACTIVITY: Endohydrolysis of 1,4-alpha-glucosidic

-! COPACTOR: Binds 3 calcium ions and 1 sodium ion per subunit.

-! SUBUNIT: Monomer.

-! SUBCLIALLAR LOCATION: Secreted.

-! SIMILARITY: Belongs to family 13 of glycosyl hydrolases.

-! CATALYTIC ACTIVITY: Endohydrolymis of 1,4-alpha-glucosidic
linkages in oligoaccharides and polysaccharides.

-! COFACTOR: Binds 3 calcium ions and 1 sodium ion per subunit.

-! SIDUNIT: Monomer.

-! BIOTECHNOLOGY: Used in the food industry for high temperature
liquefaction of starch-containing mashes and in the detergent
industry to remove starch. Sold under the name Termamyl by
                                                                                                                                                                                                                                           X-RAY CRYSTALLOGRAPHY (1.9 ANGSTROMS) OF 330-512.

-i- DEVELOPMENTAL STACE: Production of alpha-amylase is hormonally regulated. Germinating embryos produce the hormone gibberellic acid, which within 10 hours stimulates the aleurone cells covering the endosperm of the seed to produce alpha-amylase. The enzyme then degrades the starch within the endosperm for use by the

-!- COFACTOR: Binds 3 calcium ions per subunit (By similarity).
-!- SUBUNIT: Monomer.
-!- TISSUE SPECIFICITY: Germinating seeds.
-!- DEVELOPMENTAL STAGE: Expressed at a high level during germination in the aleurones cells under the control of the plant hormone gibberellic acid and in the developing grains at a low level.
-!- SIMILARITY: Belongs to family 13 of glycosyl hydrolases.

-! CATALYTIC ACTIVITY: Endohydrolysis of 1,4-alpha-glucosidic
-! CATALYTIC ACTIVITY: Endohydrolysis of 1,4-alpha-glucosidic
-! COFACTOR: Binds 3 calcium ions per subunit (By similarity).
-! SUBUNIT: Monomer (By similarity).
-! SEBUNIT: Monomer (By similarity).
-! DEVELOPMENTAL STAGE: Production of alpha-amylase is hormonally regulated. Germinating embryos produce the hormone gibberellic acid, which within 10 hours stimulates the aleucone cells covering the endosperm of the seed to produce alpha amylase. The enzyme then degrades the starch within the endosperm for use by the
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   barley.
-!- MISCELLANEOUS: Type B isozyme mRNA is undetectable in unstimulated
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Rahmatullah R.J., Huang J.-K., Clark K.L., Reeck G.R., Chandra G.R., Muthukrishnan S.; Mutholocide and predicted amino acid sequences of two different genes for high-pl alpha-amylases from barley."; Plant Mol. MEDIUM TYPE: Floppy disk

COMFUTER: IBM PC compatible

OPERATING SYSTEM: PC-DOS/MS-DOS

SOSTWARE: BAEADII Release #1.0, Version #1.25

SOSTWARE: Patentin Release #1.0, Version #1.25

CURRENT APPLICATION DATA:

APPLICATION NUMBER: US/08/446,803

FILING DATE: 01-June-1995

CLASSIFICATION: VA35

ATTORNEY/AGENT INFORMATION:

NAME: HATINGTON, James J.

REFERENCE/DOCKET NUMBER: 4157.204-US

TELEPHONE: (212) 8677-0123

TELEPHONE: (212) 878-9655

INFORMATION FOR SEQ ID NO: 2:

SEQUENCE CHARACTERISTICS:

LENGTH: AMINO acids

TTELEPHONE: AMINO acids

TELEPHONE: AMINO acids

TYPE: AMINO acids

No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.
                                                                                                                                                                                                                                                                               US-10-081-739A-2
